PassagePoint™ Web Pre-Registration

Cuts Registration Time By As Much As 90%

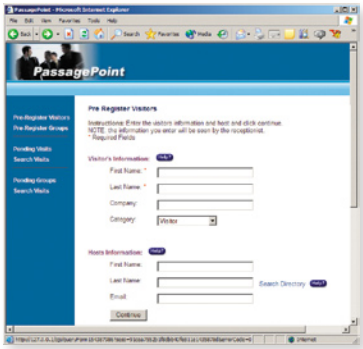
STOPware's web pre-registration provides an exceptionally fast way for employees or building tenants to pre-register visitors, even groups numbering in the hundreds. This lobby security tool is far more than a web-based form. It's a robust online application that increases control of the pre-registration process and reduces the time it takes to sign-in and badge visitors by as much as 90%.

STOPware Has The Solution

PassagePoint clients can choose either the Web pre-registration module, and use their own server as host, or choose MyVisitors.net and have STOPware host the pre-registration application in a secure data center.

Web Pre-Registration Module Solution

For customers who want the pre-registration process to be inside their own I.T. structure, the Web Pre-Registration Module is the perfect choice. Used by single companies with one or more buildings, the module allows for an unlimited number of employees to pre-register their guests or groups of guests.



MyVisitors.net Solution

MyVisitors.net eliminates the need for extra hardware, special firewalls, and daily maintenance of a web server. This pre-registration choice is invaluable for multi-tenant buildings, campuses, gated communities, or any organization without a common network, or those with limited server capacity and I.T. staffing.

Key Features and Benefits of Web Pre-registration

- Pre-register individuals or import groups of visitors from a list
- Pre-register once for multiple recurring visits
- Specify access levels and provide special instructions for lobby staff
- Reduce visitor wait time and ease lobby staff workload
- Pre-print badges to save time
- Designate access by buildings, floors and work areas
- Record primary and secondary host contacts to aid registration

Customization and Added Security

- Option to use PassagePoint application server to manage log-ins or use existing 3rd party web-based password systems*
- Ability to customize HTML pages and fields to match corporate "look and feel"
- Ability to add secondary approval level/security check of pre-registrations*

*Web module only
